

JLG Forklift Part

JLG Forklift Part - In the late 1960's John L. Grove, with his wife Cora embarked on a cross country journey in their RV. Recently retired, after spending several years working with his brother to build their crane company into a market leader, John had no idea that important trip would allow JLG Industries, Inc to emerge. The world leader of mobile aerial work platforms and precision materials handling equipment was the end result of a road expedition.

During their journey, John reacquainted himself with former business associates along the way. In combination with these conversations and a significant event; two workers had been unfortunately electrocuted on scaffolding when the Groves were passing through the Hoover Dam. John uncovered an infinite market for a product that could promptly and safely lift people in the air to accomplish maintenance and other building functions.

After returning from their vacation, John set up a partnership with two of his friends and purchased a metal fabricating business in McConnellsburg, Pennsylvania. Starting with a small crew of twenty personnel, they produced and sold their first JLG aerial work platform in 1970. The business incorporates many of the basic design elements of that original lift into existing models.

Since then, JLG Forklifts have come a long way from when Mr. John L. Grove returned from his fatefull cross-country journey and since the first JLG aerial platform entered the marketplace. As of today, the company has extended itself into a number of global markets and continues to cultivate modern machinery to guarantee that clients are able to become safer and more resourceful within their workplace.
