

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings that are utilized on lift masts so as to help them function within challenging environmental surroundings. Lift masts are often subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is frequently exposed to environmental influences such as dust, cold, heat, contamination, aggressive ambient air and moisture. Thus, the lift masts' guidance arrangements have to be particularly strong and have a specific high load carrying capacity.

Carriage rollers have been developed as the solution for functioning in different environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts should be cost-effective and maintain operational security while having the ability to handle a specifically high load carrying capacity.
